# How to Set a Default Zoom Level for One Website in Chrome
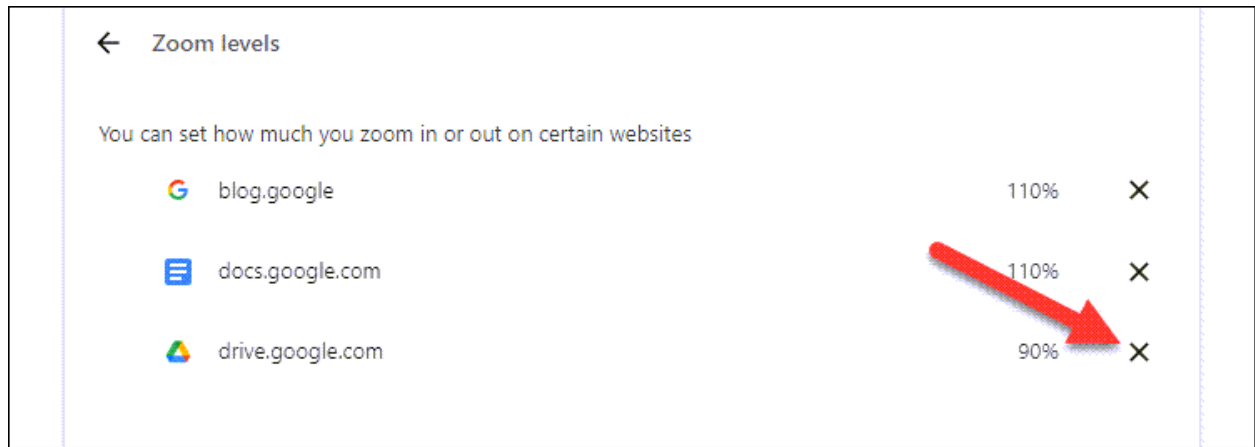

Click the three vertical dots in the top-right corner of Chrome. In this drop-down menu, click the Minus (-) or Plus (+) icons to zoom out or in, respectively.

Scroll down and click "Site Settings."

Now, locate the "Zoom Levels" option under "Content." In this menu, you can view the custom zoom levels you've set for any given website. Click the "X" icon to delete this setting. Currently, Chrome doesn't allow you to set the zoom levels here.
